👋 Hi, I'm Rohit Mainkar

Full Stack Developer | React.js | Python | FastAPI | AI Applications

I'm a Full Stack Developer with approximately **5 years of software development experience**, including around 3 years working with React.js and 2 years with Python.

I build business applications, REST APIs, ERP and POS systems, database-driven services, third-party integrations, and AI-powered applications. I enjoy solving real-world business problems by developing reliable, maintainable, and scalable software.

🛠️ Technical Skills

Frontend

- React.js, JavaScript, HTML5, CSS3
- Responsive UI development and API integration

Backend

- Python, FastAPI, REST API development
- SQLAlchemy, Pydantic, asynchronous programming
- Microservices and backend service integration

Databases

- MySQL, PostgreSQL, SQLite
- SQL queries, database design, relationships, and migrations

AI & Data Applications

- LlamaIndex
- SQL AI Agent development
- AI chat APIs and database-connected applications

Messaging & Integrations

- Apache Kafka, MQTT, WebSockets
- Third-party API integration
- Event-driven workflows and real-time status updates

Tools

- Git, GitHub, Postman, Docker, Alembic, Uvicorn

🚀 Featured Projects

1. FoodERP — ERP & Business Management System

Developed and worked on ERP functionality supporting day-to-day food business operations.

- Sales and purchase management workflows.
- Inventory and stock-related operations.
- Integration of business modules with backend APIs and databases.
- Support for interconnected ERP workflows and data consistency.

Technologies: React.js, Python, FastAPI, SQL, relational databases.

2. POS Billing Software — Billing & Sales Operations

Worked on POS billing software designed to support restaurant and retail-style business transactions.

- Billing and sales workflows.
- Product and item-related operations.
- Integration between application screens, backend services, and database records.
- Troubleshooting application and transaction-related issues.

Technologies: React.js, Python, SQL, REST APIs.

3. Online Food Aggregator Integration Platform

Worked on an integration and management platform connecting restaurant POS operations with online food delivery aggregators such as Swiggy and Zomato.

- Store ON/OFF and real-time store status integrations.
- Menu and item management workflows.
- API request/response validation and integration troubleshooting.
- Aggregator UAT testing and store configuration handling.
- Backend service workflows for order and notification processing.

Technologies: Python, FastAPI, REST APIs, SQL, Kafka, WebSockets.

4. AI SQL Agent

Worked on an AI-powered SQL application using LlamaIndex to support interaction with database information through natural-language queries.

- AI application and database integration.
- SQL-focused question-and-answer workflows.
- Backend development and troubleshooting of data interactions.

Technologies: Python, LlamaIndex, SQL, AI integration.

5. Food Menu Manager

Worked on menu assignment and item control functionality for organization, merchant, and aggregator-level configurations.

- Menu assignment and item management.
- Assignment precedence and fallback logic.
- Backend repositories and database relationships.
- Schema validation and data-loading troubleshooting.

Technologies: FastAPI, SQLAlchemy, PostgreSQL, Python.

6. SCM ERP — Supply Chain Management

A separate ERP project focused on supply-chain business workflows.

Focus: ERP application development and business process management.

7. TakPro — SOP & Task Management

A separate application for SOP management, reminders, and organization-level task tracking.

Focus: Task workflows, reminders, and operational management.

8. ERP AI Chat Service

Worked on backend APIs for AI chat functionality within an ERP application.

- Chat conversation management.
- Streaming AI query endpoints.
- Database-backed conversation records.

Technologies: Python, FastAPI, SQL databases, streaming APIs.

What I Bring to a Team

- Full-stack development across frontend and backend.
- Experience building business-oriented ERP and POS applications.
- REST API design, integration, testing, and debugging.
- SQL database development and data-driven workflows.
- Third-party platform integration and real-time communication.
- Practical experience exploring AI-powered database applications.

Let's Connect

I'm interested in opportunities involving **Full Stack Development, React.js, Python, FastAPI, backend engineering, and AI-enabled applications**.
